## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al (New Fast Algorithms for the Estimation of Block Motion Vectors) in view of Pullen et al (5,923,376) for the same reasons as set forth in Section 3 of the last office action, dated 5/5/08.

3. Claims 10-15 are also rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al (New Fast Algorithms for the Estimation of Block Motion Vectors) in view of Pullen et al (5,923,376) for the same reasons as set forth in Section 3 of the previous office action, dated 7/11/06.

### ***Response to Arguments***

4. Applicant's arguments filed 8/4/08 have been fully considered but they are not persuasive. Applicant asserts on page 11 of the Remarks that even if the estimating method of Liu et al were to illustrate an 8 to 1 or 16 to 1 subsampling pattern, Liu et al fails to disclose the pixels are collinear with all other pixels. However, to illustrate an example of the 8 to 1 subsampling pattern, an 8 x 8 block of pixels of Liu et al would look like this the following wherein the pixels from the set a, for example, is collinear with all other pixels in the set:

a b c d e f g h  
a b c d e f g h  
a b c d e f g h

a b c d e f g h  
a b c d e f g h  
a b c d e f g h  
a b c d e f g h  
a b c d e f g h

Furthermore, it is noted applicant's own specification, [0027]-[0029], explicitly state that variations in the arrangement of pixels are merely different embodiments of subsampling patterns. Therefore, one of ordinary skill in the art would have had no difficulty in recognizing that other sizes and shapes of the sampling blocks are merely obvious variations of the same concept. That is, unless by doing so produces novel and/or unexpected results, the sampling patterns are merely considered as well known design options that are obvious to one of ordinary skill in the art because they provide no significant functional or patentable differences.

Applicant also appears to argue on page 11 of the Remarks that claim 10 is directed to some other novel feature. However, applicant is reminded that in the response filed on 7/27/05, applicant explicitly stated that the claims in the different groups are NOT patentably distinct.

### *Conclusion*

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
